WE'RE HIRING

VACANCY: APPRENTICE SUSTAINING & PROCESS ENGINEER

The Apprentice Process & Sustaining Engineer is responsible for supporting manufacturing methods and processes, as well as contributing to design activities related to the maintenance, reliability, and continuous improvement of Timberwolf products throughout their lifecycle.

The role supports both new and existing products, including the implementation of design improvements, contributions to innovation, lean manufacturing initiatives, and compliance with relevant industry standards. The apprentice will need to be willing to learn from different engineers and be able to carry out hands on activities.

Working closely with the Production and Operations teams, the Apprentice Process & Sustaining Engineer will help optimise manufacturing processes to deliver high-quality products in an efficient and cost-effective manner. The ideal candidate must be willing to work with large-scale data and be keen to learn and develop proficiency in MRP systems.

Alongside the role, the apprentice will be working towards formal qualifications and will report to the Lead Sustaining and Process Engineer.

For external applicants please send your CV to careers@timberwolf-uk.com
